Roll no:- 230701221

Lack of Clear Hierarchy – The category titles (e.g., "Bed," "Living," "Kitchen," etc.) are placed below the images and might not be immediately noticeable. A better approach could be overlaying the text on the images for better visibility.

1. **Navigation Overload** – The bottom navigation bar contains five icons, which might be excessive. If "Search" and "Bag" are not frequently used, they could be merged or moved elsewhere to reduce clutter.
2. **Menu Button Placement** – The hamburger menu is in the top right corner, which is standard, but there's no visual cue about what it contains. A clearer label or an open-state preview could improve usability.
3. **No Visual Feedback** – The selected category is not highlighted, which may cause confusion about the user's current position in the app.
4. **Spacing and Readability Issues** – The category text is small and positioned far from the images. Increasing font size or contrast could enhance readability.
5. **No Call-to-Action (CTA)** – There's no immediate action the user can take. A "Shop Now" button on each category image could improve engagement.
6. **Inconsistent Backgrounds** – The images have different styles and backgrounds, which can make the design feel less cohesive. A more uniform color palette would create a cleaner look.
1. **Better Background Choice** – The light beige background gives a warm and soft look, making the content more readable and visually pleasing.
2. **Consistent Image Style** – The selected images have a more cohesive aesthetic, creating a polished and premium feel. This improves brand perception and user engagement.
3. **Improved Navigation Icons** – Adding clear, labeled icons for Home, Categories, Search, Cart, and Profile improves usability and helps users navigate effortlessly.
4. **Balanced Layout** – The categories are arranged in a more structured grid, making it easy to scan and reducing cognitive load.
5. **Category Text Placement** – The category names (Bed, Kitchen, Living, Bath) are placed directly below the images in a clean and readable manner. This makes it easier for users to understand the sections at a glance.
6. **Better Contrast and Readability** – The black text on a light background enhances readability, ensuring that users can quickly recognize categories and navigation options.
